

### New products, a new logo ... a new élan!

In 2004 Europe Look BV received the Z&R Award "Product of the Year" which then was the appraisal for an especially innovative product. A promising product which also conquered the Dutch market convincingly. Transparent roller shutters are the solution for the retail business, because they combine the highest possible security with optimal transparency. The presentation in the display window invites the passing public, however, the passenger with less good intentions does not stand a chance.

With this combination of both transparency and security, Europe Look became an absolute trendsetter in the roller shutter business. A position which we have proven several times during the last couple of years. However, we move on; 2010 is a new challenge to us which we pleasantly like to face. With a new élan which will be emphasized by our new logo.

With this newsletter we also draw your attention to our new transparent products. Curious? Please check our new website [www.eurolook.nl](http://www.eurolook.nl) or give us a call to make an appointment at your convenience.

### Europe Look moves to Venlo

Europe Look moves. As per January 1, 2010 we will operate from our new location in Venlo which offers us even more possibilities to develop new products and further optimize our existing roller shutter concepts. A spot where we can direct the complete process from development to assembly ourselves and from where we are able to support our customers even more than now. We also remodelled our organisation in order to enable us to react even faster and more efficient to your questions.

### Our showroom in Venlo

At our new location in Venlo we have a showroom at our disposal, which is situated in the immediate vicinity of our assembly department and warehouse. There we have all the space we need to display our products and inform and advise you on our different types of transparent roller shutter. An ideal place as well to train technical staff and provide knowledge and understanding of the technical aspects and different applications. You are most welcome!
